

HOW TO STOP ELECTRONIC HARRASSMENT

WHY DO PEOPLE HARRASS YOU? THAT IS THE FIRST STEP IN FIXING YOUR PROBLEM, REALIZE YOU HAVE ONE AND THAT IT IS BECAUSE OF TWO FACTORS. 1. YOU, 2. THEM.

THERE IS A REASON THEY ARE HARRASSING YOU...
ELIMINATE THE FACTORS AND THEY WILL STOP HARRASSING YOU...
FACTORS CAN BE ANYTHING THAT MAKES HARRASSING YOU EASY OR TEMPTING THAT IS SOMEHOW DIFFERENT THAN THE AVERAGE JOE OR MARY. THEY MAY HAVE A GRUDGE ON YOU BECAUSE OF SOMETHING YOU OR THEY DID AND YOU ARE SOMEHOW GUILTY OF WHATEVER, AT LEAST IN THEIR MIND.

LOOK AT HOW YOU ARE BEING HARRASSED, IS IT PERSONAL OR GENERAL, IS IT LIFE THREATENING OR JUST TO SCARE OR BOTHER YOU, IS IT HIGH TECH OR SIMPLE, IS IT CONSISTANT OR RANDOM, IS IT CONTAINED TO JUST YOU OR OTHERS YOU KNOW, IS IT THE SAME TYPE OF HARRASSMENT EVERY TIME, ARE THERE ANY WITNESSES THAT HAVE WITNESSED THE HARRASSMENT IN ACTION??????????

ANWER THE ABOVE QUESTIONS BEFORE YOU CAN FIX YOUR PROBLEM...

IF THE HARRASSMENT IS BY PHONE, GET YOUR NUMBER CHANGED AND UNLISTED.

IF THE HARRASSMENT IS BY STALKING, SET UP INFRARED LIGHTS AROUND YOUR PROPERTY AND GET DOGS.

IF THE HARRASSMENT IS BY FOLLOWING YOU, SLOW DOWN SO YOU CAN SEE THE MAKE AND MODEL OF THE CAR, THEN FOLLOW THEM.

IF THEY ARE IN CONSTANT VIEW OF YOU AND KEEP WATCHING YOU, GET A CAMERA AND TAKE THEIR PICTURE IN PUBLIC VIEW.

IF THEY ARE USING HIGH TECH ELECTRONICS, THEN YOU HAVE PROBLEMS... WE WILL TRY TO FIX YOUR PROBLEMS IN THE NEXT FEW PAGES.

REMEMBER THAT IN ORDER TO FIGHT FIRE YOU MUST BURN HOTTER THAN THE FIRE.

ELECTRONIC H IS SERIOUS STUFF.

THERE ARE A COUPLE MAIN TYPES OF EH:

- 1. SURVIELLANCE**
- 2. ANOYANCE**
- 3. DESTRUCTIVE**
- 4. DEADLY**
- 5. MESSAGE SENDING**

#1. IS EASY AND ONLY INVOLVES TWO BASIC PARTS, SOUND AND SIGHT IN GENERAL. SIGHT INCLUDES IR, UV AND ALL VISIBLE LIGHT, IF THEY CAN SEE INTO YOUR HOUSE OR OBTAIN ANY LIGHT FROM WITHIN YOUR HOUSE THEN THEY CAN SEE AND POSSIBLY HEAR YOU. IF THEY CAN OBTAIN ANY SOUND WAVES FROM WITHIN YOUR HOUSE THEN THEY CAN POSSIBLY HEAR YOU. VIBRATIONS FROM THE SOUND ON WINDOWS CAN ALSO BE HEARD BY LASER REFLECTION. USING THICK PLASTIC LEXAN INSTEAD OF GLASS IS THE BEST WAY TO GO, PLACE THE LEXAN 2MM FROM THE GLASS ON THE OUTSIDE.

#2. THERE ARE MANY WAYS ONE CAN DO THIS TO YOU. AS SIMPLE AS KNOCKING YOUR TRASH OVER TO BLOWING YOUR CAR UP. PLACE ALL VALUABLE POSSESSIONS IN A GARAGE OR YOUR HOUSE, DO NOT LEAVE THEM OUT. CARS CAN ALSO BE DESTROYED USING MICROWAVE BEAMS AND EM PULSES, BOTH WILL KNOCK OUT THE COMPUTER WITHIN. MICROWAVES CAN ALSO COOK YOU.

#3. IS SIMILAR TO ABOVE BUT THEY DESTROY YOUR PROPERTY. WINDOWS, CARS, MAILBOXES, MAIL, TREES, ETC...GET THEM ON TAPE AND TURN THEM IN. SET UP RAZOR WIRE TO TEACH THEM A LESSON. IF THEY USE PLASMA ON YOUR ELECTRICAL SYSTEM YOU ARE SCREWED...THEREFORE YOU SHOULD INSULATE YOUR ELECTRICAL LINE WITH A PLASMA DIVERTER (ITEM#PDIVERTER COST \$25.00EA) THE DIVERTER WILL STOP 90% OF THE PLASMA FROM GETTING INTO YOUR HOUSEHOLD CURRENT WHICH CAN DESTROY ELECTRONIC EQUIPMENT LIKE TV'S TO COMPUTERS.

#4. NOW THEY ARE TRYING TO TAKE YOUR LIFE OR HURT YOU REALLY BAD. FIGHT BACK WITH NO MERCY. uWaves, LASERS, FIRE, SMOKE, BOMBS, HIGH VOLTAGE, PLASMA, RADIATION, EM PULSES, ETC...HIRE PRO HELP. uWaves ARE THE SIMPLEST TO OBTAIN AND USE...MODIFYING A

MICROWAVE OVEN IS ALL IT TAKES. MICROWAVES CANNOT GO THROUGH METAL OR METAL SCREENING. LASERS CANNOT GO THROUGH A REFLECTIVE SURFACE MADE OF ALUMINUM UNLESS IT IS VERY HIGH POWER AND VERY EXPENSIVE. HIGH VOLTAGE CAN BE STOPPED BY USING AN ISLATED CIRCUIT AND DC TRAPS. RADIATION CAN BE STOPPED WITH LEAD OR CONCRETE, EM PULSES CAN BE STOPPED WITH A FARADAY CAGE SETUP OR GROUNDED STEEL MESH OR WALLS.

IF YOU ARE BEING HARRASSED WITH ELECTRONIC MEANS, YOU MUST FOLLOW THESE STEPS TO SOLVE YOUR PROBLEM:

1. FIND OUT WHAT TYPE OF ELECTRONIC HARRASSMENT THEY ARE USING. TO DO THIS GET A EM DETECTOR, MICROWAVE DETECTOR, FREQ COUNTER AND YAGI ANTENNA, AND AN RF DETECTOR.
2. ONCE YOU HAVE FIGURED OUT WHAT TYPE OF HARRASSMENT THEY ARE USING YOU CAN ACT.

BUGS ARE A PROBLEM... YOU MUST EITHER FIND THEM OR DESTROY THEM. TO DESTROY THEM REMOVE ALL PHONES AND OTHER EQUIPMENT CONNECTED TO YOUR LINE, GET A CORD AND PLACE ONE END OF IT IN THE LINE, STRIP THE OTHER END TO YOU HAVE TWO BARE ENDED WIRES, ZAP THE WIRES WITH A STUN GUN FOR 5 SECONDS, THIS SHOULD WORK BUT IT MAY NOT... NOW PLACE A CHARGED 300VDC CAPACITOR AT 1000uF ACCROSS THE WIRES, THIS SHOULD WORK...

UUE HAS WORKED WITH MANY VICTIMS OF ELECTRONIC HARRASSMENT AND HAS HELPED MANY PEOPLE STOP THE PROBLEMS USING SIMPLE METHODS. ALTHOUGH SOME ARE NOT SO SIMPLE.

IF YOU NEED ASSISTANCE BY PHONE, SEND US YOUR PHONE NUMBER ALONG WITH \$5.00 PHONE FEE AND WE WILL CALL YOU ON A VERY SECURE LINE. UUE 1839-D WEST VISTA WAY #515 VISTA CA 92083.

ELECTRONIC HARRASSMENT IS SERIOUS AND TAKES UP YOUR VALUABLE TIME AND EFFORTS, WE DO NOT HAVE TO PUT UP WITH IT. SOLVE YOUR PROBLEMS...

First of all to test for bugs, you need a VOM (Multimeter) the higher the impedance the better (a Digital with FET circuitry or a Vacuum Tube Volt Meter is the best).

First disconnect the phone line(s) AT BOTH ENDS. Undo the phone instrument and hook it up to the entry point of the phone line from the outside world (Ma Bell does not like you cut her off completely.) The scheme is the physically isolate your house, apartment, etc from the outside world. But before you do this measure the line voltage (It should be approximately 48 Volts).

Now with the wires disconnected at both ends set your resistance scale to a high reading and measure the resistance of the phone line, it should be very high on the order of million ohms or more, this is the normal condition, since you are measuring the resistance of an open circuit. If it is much less, say 50-100Kohms then you have a device on the line that does not belong there, probably a parallel disconnected wire and go to the other end and measure the resistance of this. This resistance should be about one ohm or two at the most in a big house with a lot of phones. If it is more, then you probably have a series bug.

If in the first case, taking parallel measurements using a meter (not LED/LCD) and you notice a "kick" in the needle, you probably have a line tap

Now if you also make a measurement with the wire ends twisted together and you notice the resistance reads about 1-2kohms, then you may have a drop-out relay. A drop-out relay is a relay that senses a phone going off hook, and signals a tape recorder to start recording.

Another test to do with the phones still hooked up to the outside world, on hook

voltage is about 48 Volts and off hook is about 6-10 Volts. Any other conditions may mean telephone surveillance.

If you use a Wide Range Audio frequency generator and call your house, apartment, etc. from another phone and sweep up and down the spectrum, and you notice the phone answers itself somewhere in the sweep you probably have an infinity transmitter on your line.

The above information tells nothing about TELCO taps at the central office, or anywhere else along the line, but this information may tell you that your wife, girlfriend(boyfriend), or business associate may be monitoring your phone activities.

An Infinity transmitter, is a neat device It allows you to call the bugged place and it shuts off the ringer and defeats the switchhook, so the mouthpiece now becomes a room bug. It was originally sold from the travelling business man to make sure his wife was safe at home not being attacked (or fucking her boyfriend behind his back).
